Natasha Nicholas

Braintree, MA 02184 || nnicholas2020@gmail.com || 617-959-2378 || Linkedin

EDUCATION

Northeastern University, Boston, MA *Graduation: April 2026*
Masters of Science; Major: Computer Science

College of the Holy Cross, Worcester, MA *Graduation: May 2024*
Bachelor of Arts; Major: Computer Science, Pre-Med Track

Relevant Coursework: Algorithms, Artificial Intelligence, Computer Vision, Data Mining, Databases, Machine Learning, Programming Design, Programming Languages, Web Development

TECHNICAL PROJECTS

Social Media Platform *React.js, TypeScript, Node.js, MongoDB* || Frontend || Backend
- Built a full-stack social media app, with RESTful APIs and MongoDB schemas as the core functionality
- Integrated third-party APIs to handle media uploads and content processing

Patient Portal *Python, SQL*
- Collaborated in a team to build a portal allowing pharmacists to view patient medications and prescribing physicians
- Primarily developed SQL queries to structure and retrieve patient and medication data

Built-It *Swift*
- Collaborated in a team to create an AR game, combining user location with an item collection and crafting mechanic
- Led app design, enabling users to navigate to real-world coordinates and collect virtual items to craft a final item

Space Flight *Python, C++* || Repository
- Built a real-time pipeline in OpenCV to detect objects from pixel data, comparing centroid tracking and optical flow
- Built an evaluation pipeline comparing tracker accuracy across noise levels, with automated error logging and plotting

Pac-Man AI Agent *Python* || Repository
- Collaborated in a team to implement a Q-learning agent with epsilon decay; trained episodes in a custom environment
- Built a softmax-based evaluation policy to measure win rate and average reward over 1,000 episodes

WORK EXPERIENCE

Digital Project Management Intern, Garment Valet *Boston, MA || Summer 2026-Present*
- Integrated company software into a new internal system using API calls to streamline data flow between platforms
- Built personalized landing pages for concierges to drive inbound customer inquiries and expand the client base

Data Analytics Intern, Karh *Cambridge, MA || Fall 2025*
- Analyzed and visualized energy usage data across NYC building types to inform battery storage allocation

Sales Associate, LensCrafters *Braintree, MA || Summer 2025-Present*
- Assisted customers with exam scheduling and eyewear selection while supporting store operations

Research Student, Hupp Lab, College of the Holy Cross *Worcester, MA || Fall 2023-Spring 2024*
- Built PCA based clustering and classification programs in R to analyze biofuel sample chemical composition from GC-MS

SKILLS

Languages: Bash, C++, CSS, HTML, Java, JavaScript, MATLAB, MongoDB, Python, R, SQL, Scheme, Swift, TypeScript
Tools & Frameworks: Figma, git, Google Workspace, LaTeX, Make, Microsoft Office, Node.js, React.js
